

CORPUS

Secure patient records

Corpus is a revolution in electronic patient records, providing easy and secure access to your patient records from wherever you are.

Whilst other systems may claim to be 'easy to use', Corpus is the real deal! It's simple to learn, yet hugely efficient, and makes my life a lot easier.

Emilie Bates
Practice Manager
76 Harley Street

All patient notes and files in one place

Greater efficiency for first class patient care

- instant retrieval of records from any computer
- workflow support customised to your processes
- streamline requests for clinicians to review test results
- quick and easy letter templates
- reminders to fax, file or post files
- contact reminders for courtesy calls to patients
- overview of all Practice activity for directors and managers
- preview files to quickly view them without downloading
- fine-grained access permissions for different users
- automatically records who did what with each file and when

Access from anywhere

Improved security, greater convenience, faster response

- access patient records at reception or in consulting rooms
- access from home or another clinic
- share records online with authorised external clinicians
- avoids insecurity of transferring records by email, fax, or post

Hosted by experts

Benefits of choosing a hosted solution

- no hardware or software to buy or maintain
- records stored in a dedicated data centre with 24-hour security
- backups made to second location
- constant system monitoring
- upgrades and new releases constantly rolled out
- greatly reduced risk of loss of records through theft, fire or loss

Corpus enables us to build a much richer picture of our patient's health; enables us to securely access patient records from anywhere; and easily share information amongst the clinical team.
